MEMORIES FOR KIDS PRESENTS....

Magical MARVELOUS

MEMORIES 5K RUN/WALK

A Superhero & Fairy Tale 5K Fundraiser Tracker

Community Impact Project · Spring 2026

Built for Memories For Kids · $25,000 Goal

AIML 1870 · Vibe Coding

CHAPTER I · THE KINGDOM

Meet Memories For Kids

A nonprofit creating meaningful memories for children facing grief or hardship

Their Mission

Creating cherished experiences for kids who need them most.

Who They Serve

Children and families navigating illness, hardship, and life's toughest chapters.

Their Quest

Raise $25,000 through their Superhero & Fairy Tale 5K community event.

"Every child deserves a story worth remembering."

The Problem We Identified

Memories For Kids had the heart. Technology was missing.

- No live dashboard tracking progress toward the $25K goal — donors had no visibility
- Runner registrations and sign-ups managed manually in spreadsheets
- No gamification or recognition to celebrate top fundraisers and sustain momentum
- Event excitement faded after race day — no lasting web presence for future donors
- Missed chance to convert excited race-day runners into long-term supporters

What We Built

An interactive 5K Fundraiser Tracker — turning every dollar into visible progress.

Live $25K Dashboard

Real-time thermometer with milestone celebrations at $5K, $10K, $15K, $20K, and $25K.

Hero Leaderboard

Top fundraisers earn titles from Sidekick to Legendary Champion.

Runner Registry

Interactive sign-up tracker for runners, donations, and tributes.

Impact Visualizer

Every dollar shown as real outcomes — memories created and kids served.

CHAPTER V · THE WIZARD'S WORKSHOP

How We Built It

Design with Claude · spec it · build with Claude Code · deploy to the web

Week 1
Partner Discovery

Week 1
Group Design Session

Week 1
spec.md Written

Week 2
Build & Integrate

Week 2
Deploy to GitHub Pages

Claude Design

Collaborative prompting shaped the full vision before any code was written.

spec.md Docs

Detailed specs drove each component — tracker, leaderboard, and registry.

GitHub Pages

Fully live, publicly accessible, and ready for Memories For Kids to use.

How This Helps Memories For Kids

Real technology delivering real impact for children who need it most.

More Donations
Live progress bars create urgency — donors give more when the goal is within reach.

Sustained Excitement
Milestone celebrations at $5K, $10K, $15K, $20K give moments to cheer and share.

Hero Recognition
The leaderboard turns fundraising into a quest — friendly competition and social buzz.

Zero Manual Work
Real-time tracking replaces spreadsheets — the team focuses on the kids, not the data.

Lasting Presence
The site lives on after race day, strengthening every future fundraising campaign.

What Our Team Learned

This wasn't a class assignment — it was a responsibility to real children and families.

Empathy Drives Design

The best features came from understanding what MFK needed — not what 'cool tech' looks like.

Agentic Teamwork

Dividing specs by feature and integrating them showed how Claude Code powers real collaboration.

Ship Speed Is Real

From vision to deployed product in under two weeks. Small teams can create outsized impact.

If We Had More Time...

Donor portals, race-day photo galleries, automatic data pulls for tributes.

Every Child Deserves

a Memory Worth Keeping.
